Request for Labeling of Genetically Engineered Foods

Dear FDA Commissioner Jane Henney,

I am writing to request that the FDA require the mandatory labeling of all genetically engineered foods, regardless of whether the food is in its whole form or as an ingredient in processed foods.

Recently, the national media has run numerous stories about how millions of tons of StarLink corn – possibly allergenic and unapproved for human consumption – was accidentally used in Taco Bell taco shells, as well as other corn products. This fiasco highlights the great importance of protecting consumers' safety through labeling. I personally don't want to eat meat from animals who are fed genetically engineered feed.

Public opinion polls show the vast majority of Americans want genetically engineered foods labeled. (81% in a 1999 Time magazine poll.) Yet the FDA is allowing genetically engineered foods to come to market unlabeled arguing these foods are no different than those produced by typical hybridization. Studies, however, show crops modified by genetic engineering may contain increased levels of natural toxins and lower levels of valuable nutrients.

The FDA says that if a genetically engineered food contains a known allergen it must be labeled. But what about the unknown allergens that may be created in these experimental foods? Genetically engineered crops often contain proteins that have never before been consumed by humans as food. Further, there are serious questions about the safety of these crops for the environment. And people with certain ethical or religious beliefs worry about inadvertently eating genes from foods they would not knowingly consume.

It is critical that you REQUIRE labeling of ALL foods! I have a right as a consumer to know what is in my food!

I want to know if it is genetically engineered,
I want to know if it was sprayed with pesticides,
I want to know if fertilizers were used.

I have a right to know! And you do not have the right to deny me that information! It is time for you to stop succumbing to the greedmongers and listen to the consumers.

I do not want to eat genetically engineered corn or potatoes that contain the Bt toxin. Nor do I want to eat "Roundup Ready" soybeans or other future products such as tomatoes that contain the gene from a fish! But without labeling, I cannot avoid it. I request that the FDA require all genetically engineered foods and ingredients be labeled.

Thank you!

Sincerely,

Patty B
